prime FREE Delivery Wed, Dec 18
Amazon Certified: alexa built-in

With scrapy we can crawl sites to get lots of useful information, but sometimes we don't want to save data locally. Our library will make it easier to combine databases and our scraped data.

Together, we created a library that allows us to call preexisting spiders from scrapy, and through the parsed data, we can create a new table based off the information we scraped, and also inserting that information into the newly created tables.
